Dear Dr Babu,

Greetings from New York. Please allow me to introduce myself as Senior Editor at Springer. As you may know, we are an international publisher of scholarly research and reference works in a variety of academic disciplines.

I have recently received a book proposal entitled "**IoT and AI Models for Improving the Management of Agricultural Systems, Food Safety and Security: Smart Tech for Agriculture and Food Security**" from Dr P. William (Sanjivani College of Engineering, India). His editorial colleagues are Sharmila Arun (Krishna Engineering College, India) and Prof A. K. Haghi (University of Coimbra, Portugal). The project is being submitted to our Agriculture Automation and Control book series (<https://www.springer.com/series/15728>).

Given your research activities in this area, I wonder if you are available to review this brief proposal (2.5 pages plus a Table of Content) for scope and suitability for publication. I am delighted to offer any ebook/s of your choice from Springer (valued at US\$250 or less) as a token of my gratitude. In the event that you are unable to review for us, please feel free to suggest a colleague who might be a suitable alternative.

Book Proposal Summary

This book provides a specialized focus on the integration of the Internet of Things (IoT) and Artificial Intelligence (AI) in agricultural automation. It explores how IoT-enabled devices, AI-driven analytics, and machine learning models can optimize various aspects of farming, including precision agriculture, resource management, crop health monitoring, and supply chain optimization. The book also delves into critical issues such as food safety and security, demonstrating how automation and AI can improve traceability, contamination detection, and risk assessment in the food industry. Accordingly, our proposed book aligns seamlessly with the Agriculture Automation and Control series by addressing the growing role of smart technologies in modern agricultural systems.

I look forward to hearing from you, and thank you in advance for your time and consideration.

With best wishes,

Ken

Hi Dr Kenneth

Thank you for reaching out and for considering me for this review opportunity. I appreciate the invitation to assess the book proposal, *"IoT and AI Models for Improving the Management of Agricultural Systems, Food Safety and Security: Smart Tech for Agriculture and Food Security."* Given my research and expertise in this domain, **I would be happy to review the proposal for scope and suitability for publication.**

Please share the necessary materials and any specific guidelines or timelines for the review process. I look forward to contributing to this initiative.

Regards,
Rakesh

Dear Rakesh,

Thank you so much for agreeing to review this project for Springer. Please find attached the proposal and a guiding questionnaire to help you with the evaluation. I have also attached the editor's CVs as additional reference.

In general, we prefer to receive your comments within two weeks. Would this give you enough time to complete the assignment?

I hope you find the proposal interesting.

Ken

Hi Kenneth,

Thank for the information, i am working on the review comments , will share my review comments before 12th April.

Regards,

Rakesh

Hi Kenneth,

I have completed my review of the proposed book on "Artificial Intelligence and Internet of Things in Agriculture: Food Security and Safety", **attached the review form with my detailed review comments**.

Below is a brief summary of my evaluation:

1. **Subject & Relevance:** The topic is highly current and interdisciplinary, addressing critical global challenges like food security, sustainability, and climate-smart agriculture. Interest is likely to grow, and the content will remain relevant for 5–7 years.
2. **Synopsis & Structure:** The coverage is comprehensive, with logical organization. Minor suggestions include adding a chapter on AI-driven policy design and a concluding section on global AgriTech collaboration.
3. **Editors & Contributors:** The team is exceptionally qualified, with strong academic credentials and prior work in AI, IoT, and agriculture. Their expertise ensures scholarly rigor.
4. **Audience:** The book will appeal to researchers, students, agribusiness professionals, policymakers, and NGOs worldwide, particularly in regions prioritizing digital agriculture.
5. **Competing Works:** While similar titles exist, this book stands out by integrating ethics, food safety, and practical case studies, filling a gap in the literature.
6. **Course Use:** Suitable for undergraduate/postgraduate courses in precision agriculture, AI applications, and sustainable food systems.
7. **Recommendation:** I strongly endorse publication due to its scientific merit and practical value.

No major revisions are needed—the proposal is well-structured and ready for progression.

Thank you for the opportunity to review this timely and impactful work. Please let me know if further details would be

helpful.

Regards,
Rakesh TS

Dear Rakesh,

Thank you for your thorough and fair review of the proposal. I am certain the editors would appreciate the endorsement as well as recommendation for improvement of the proposed work. Your assessment is also very helpful for our editorial decision process.

As I mentioned previously, it would be my pleasure to offer any eBook/s (<US\$250.00) from Springer for your effort. <https://link.springer.com/>. Please indicate your selection/s and I will take care of it.

Lastly, please do not hesitate to contact me to discuss your own book project ideas.

With best wishes,

Ken
